

CleanRite™ SYSTEM

MAKES SCUM & GUNK DISAPPEAR

“ We have another food establishment who has seen the Biozyme power. They had crud built up on their cooler racks. I gave them my quart bottle, and he could not believe how well it worked on the caked on gunk. ”
- Carl, Wisconsin

CleanRite™ SYSTEM

BIOZYME™

Is a blend of bacteria designed to remove organic debris. The high volume 'Trigger Foamer' applicator expands and aerates Biozyme concentrate into a coating foam that clings to all surfaces. The 'Trigger Foamer' shoots 3 to 4 feet, applying into hard to reach areas. Portable and easy to carry. Two are packed in each case of 12 quarts.

INDUSTRIAL FOAMER, 1.5Gal

The industrial foamer is designed to apply either a clinging foam for drains or a liquid fan spray for floors, baseboards, and wall areas. Designed for professionals with adjustable mixture valve, shoulder strap and 12" extension wand to reach inside, underneath and behind equipment for more thorough application.

DRAIN BRUSH KIT

Features a 4" commercial bristle brush with 33" heavy duty handle, 8" grout brush and 2" plastic scraper designed to clean floor drains. A quick 3-step drain cleaning process: Brush – Flush with water – Brush in Biozyme. Quick, Simple, Effective.

SCRUB

FOAM

SPRAY

Biozyme is highly effective in restaurants, bars, health care, food manufacturing, nursing homes, health clubs and industrial areas where food or other organic waste accumulates and decays creating sanitation problems. The simple process of food preparation and serving results in food deposits on floors, walls and drain areas.

Biozyme digests grease, vegetable matter, slime, sludge, and other organic debris with a proprietary blend of bacterial strains targeted for digestion of specific substances. Protease for proteins, amylase for starches, cellulose for paper /vegetable fibers, lipase for fats, oils and greases.

The CleanRite system uses provides the choice of three important tools to remove organic debris, GUNK and SCUM, that builds up on in commercial facilities.

By scrubbing the drain with the 'Drain Brush Kit' you are removing 90%+ of the visible organic debris, providing your customer with instant satisfaction. The simple 3-step process takes less than 15 minutes per drain. BRUSH the inside drain surface, FLUSH with water, and BRUSH ON CleanRite Biozyme to complete the process. Mechanical cleaning is faster and uses less Biozyme.

Foaming is a great way to fill drain voids and expand the Biozyme into areas that are hard to reach such as drains, wall voids, sewers, drain lines. Foaming is also good on wall surfaces under kitchen equipment, baseboards, underneath and behind bar equipment, bundles of syrup and beer supply hoses, inside garbage cans and dumpsters, and washrooms for urine odors.

Diluting 2-4 ounces of Biozyme in mop water allows you to coat your entire floor and get material into the small cracks and other often overlooked areas that are critical in removing organic debris. Biozyme is classified as a cleaning material.

Apply Biozyme weekly for best results.

- Cleaner surfaces
- Reduced foul odors
- Improve Drain Line flow
- Deep cleaning floor surfaces

Description	Quantity	Weight
# 100610 Biozyme	12/case	30 lbs.
# 100615 Biozyme Gallon	4/case	36 lbs.
# 100620 Industrial Foamer	Each	5 lbs.
# 100630 Trigger Foamer	Each	3 lbs.
# 100602 Brush Kit	Each	3 lbs.
